Economic Partnership Agreement with West Africa
- Facts and figures –

West Africa and the European Union (EU) concluded in February 2014 the negotiations for an Economic Partnership Agreement (EPA). The deal confirms the privileged partnership between the two regions and aims to leverage trade and investment for sustainable development. It is a tool to strengthen competitiveness, support industrialization, improve export performance and improve the investment climate.

In 2020, West African exports to the EU accounted for €22.4 billion. EU exports to West Africa were worth €25.8 billion. The EU supplies a large part of the equipment that contributes to economic growth and development in the region and is the main export market for West African agricultural and fisheries products.

Using trade to boost economic development in West Africa

The EPA between the EU and West Africa has its foundations in the ACP-EU Partnership Agreement signed in Cotonou in 2000; the new ‘post-Cotonou’ Agreement initialed in April 2021 and due to be signed before the end of 2021 will continue be the framework agreement for all EPAs, especially insofar as general principles and essential elements are concerned, and its drive for inclusive, sustainable economic growth and development.

The EPA has a strong pro-development approach and is backed by significant development cooperation funds to make sure that West Africa can fully benefit of the opportunities provided by the Agreement in the area of trade. The EPA will promote West Africa’s better integration into the global trading system and support investment and economic growth in the region.

The agreement is the first Economic Partnership that brings together not only the 16 countries of the region but also their two regional organisations: the Economic Community of West African States (ECOWAS) and the West African Economic and

1 Benin, Burkina Faso, Cape Verde, Gambia, Ghana, Guinea, Guinea Bissau, Ivory Coast, Liberia, Mauritania, Mali, Niger, Nigeria, Senegal, Sierra Leone and Togo
Monetary Union (UEMOA). This is a clear indication of the West African drive towards closer regional integration, which the EPA seeks to support. Moreover, the EU is a long-standing supporter of economic integration in Africa, as an engine for economic growth and jobs and sustainable development throughout the continent. The EU fully supports the African Union efforts to implement an African Continental Free Trade Area (AfCFTA) in a way that is sustainable and inclusive. In this context, the Economic Partnership Agreements in sub-Saharan Africa and the Association Agreements in North Africa can be seen as complementary in the construction of the African Continental Free Trade Area and play an important role in building trade capacities in partner countries.

As in other ACP regions implementing an EPA, this Agreement will be put into practice in a mutually beneficial way. For West Africa, it will increase exports to the EU, stimulate investment and contribute to developing productive capacity, with a positive effect on employment. The EPA will support necessary transformative reforms and promote economic, social and sustainable development. For the EU, it opens new business opportunities and increases legal certainty for European investors in the region. It gives both partners practical tools for stepping up trade and investment cooperation and a way of solving any potential issues together.

**Improved opportunities for trade in goods**

The deal **takes account of the current differences in the level of development** between the two regions. While the EU opens its market completely from day one, West Africa will remove import tariffs only partially over a 20-year transition period. The EU offers **market access** that improves the current preferential access conditions under the EU’s Generalised Scheme of Preferences (GSP). This is particularly important for some of the main non-oil exports of West Africa such as bananas and other fruits and vegetables, fish and fishery products, processed cocoa or other processed foods, as well as textiles or leather products.

For agricultural products or finished consumer goods currently produced in the region or for which the region plans to develop production capacity, West Africa will keep applying customs duties. In its **market access offer**, **West Africa excludes 25% of tariff lines**, which covers all the products considered most sensitive and which currently face a 35% duty under the ECOWAS Common External Tariff (CET), such as meat (including poultry), yoghurt, eggs, processed meat, cocoa powder and chocolate, tomato paste and concentrate, soap and printed fabrics. Also excluded from liberalisation are half of the products currently attracting 20% duty under the ECOWAS CET such as fish and fish preparations, milk, butter and cheese, vegetables, flour, spirits, cement, paints, perfumes and cosmetics, stationery, textiles and apparel and fully built cars. At the same time, tariffs will be progressively eliminated on 75% of imported EU inputs and products such as equipment needed to make final products making them cheaper for local businesses.

In addition to the very gradual and controlled liberalisation in West Africa, the EPA includes a variety of **safeguards**, which can be deployed if imports of liberalised products are increasing too quickly to the extent of impacting local markets. Special protection is foreseen for infant industries (ones which the country seeks to develop), and the EPA allows West Africa to take specific measures in case food security is put at risk.

Besides free access to the EU and improved access to inputs, countries in West Africa
will be able to produce goods for exports to Europe using materials sourced from other countries without losing the free access to the EU, thanks to improved rules of origin. This will increase West Africa's ability to benefit from opportunities in the EU and its capacity to participate in global value chains.

The EPA also provides for enhanced cooperation in agriculture and fisheries. It foresees the establishment of a high-level dialogue on agricultural policies creating transparency and improving coherence on agricultural matters within the region and with Europe. To support agriculture in West Africa, the EU agreed not to subsidise exports of EU farm products to the region. Moreover, financial and technical support is provided to help West African farmers meet the EU’s sanitary and phytosanitary (SPS) and technical standards. To this end, Food and Veterinary Office inspectors (FVO) from the EU can audit production, storage and distribution chains including packaging and labelling and give recommendations on how to adapt them to comply with EU food safety requirements, thus facilitating exports.

Enhanced aid for trade
The EU is not waiting for the agreement to enter into force in order to support West African economies in the preparations to implement the EPA. Financial assistance is already being channeled to the region. The European Commission worked with EU Member States and the European Investment Bank (EIB) to reach a joint commitment for support to West Africa's EPA Development Programme in the new programming period 2014-2020. As a result, the EU Council of Ministers decided on 17 March 2014 to provide at least €6.5 billion to the EPA Development Programme (PAPED), using all the financial instruments available, including those of the EU Member States and the EIB.

EU support will focus on trade, agriculture, infrastructure, energy and capacity building for civil society involvement in EPA implementation. The allocated amount corresponds to the existing needs, as estimated by the West African authorities.

The EU has agreed to continue helping West Africa throughout the implementation. EU support will continue therefore also beyond 2020.

Support to regional integration
The negotiation of the EPA actively supported integration in West Africa, as the 16 countries and two regional organisations had to define common positions and policies on the issues at stake.

The West African market access offer to the EU is fully aligned with the ECOWAS Common External Tariff (CET) adopted in October 2013, which lays the basis for an ECOWAS customs union. The implementation of the EPA and the ECOWAS CET are going hand in hand and will mutually reinforce each other.

Moreover, the EPA includes important provisions to make customs procedures easier and more efficient and foresees that West African countries will grant each other at least the same treatment as they are granting the EU.

West-Africa – EU trade figures (2020)
West Africa is the EU's largest trading partner in Sub-Saharan Africa. The EU is West Africa's biggest trading partner, ahead of India, China, Switzerland and the US: the EU accounts for 20% of West Africa's exports and 22% of West Africa's imports.
In value, EU – West Africa trade amounts to more than € 47 billion.
In terms of sectors, West Africa's exports to the EU consist mainly of oil and gas (58.7%) and food products (28.9%). West Africa's imports from the EU consist of fuels (27%), food products (20.6%), machinery (23.2%), and chemicals and pharmaceutical products (10%).
