INTRODUCTION

Trade is at the centre of Europe's model of economic prosperity and competitiveness. In trade policy matters, the EU speaks with one voice globally and ranks first as the world's largest trader of goods, services, and investments. As stated in the new Trade Policy Strategy set out by the [European Commission](#) (2021), the European Union puts the focus on open strategic autonomy, building on open trade and cooperation to defend EU interests and values. Efficient, sufficiently diversified and resilient as well as sustainable global value chains are a critical component of this approach. Furthermore, trade policy has also a key role to play in the recovery from the COVID-19 pandemic and in the green and digital transitions towards a more resilient EU in the world.

The Trade Policy Review also specifies areas and actions that are critical to achieving the EU's objectives in the medium term (European Commission, 2021). One of the headline actions is to support an informed discussion on trade policy by inter-alia conducting analytical work on the impact of trade policies on employment. Against this background, Directorate General for Trade (DG TRADE) and the European Commission's Joint Research Centre (JRC) have prepared a new updated version of two published studies in 2015 and 2018 based on reliable and comparable statistics to understand how global trade flows affect employment in the EU. The two main novelties of this report are the re-estimation of all trade and jobs figures for the EU27 by taking out the United Kingdom and calculating the trade and jobs figures for the year 2019.

Following up the first (Arto et al, 2015) and second (Arto et al, 2018) editions, this report illustrates in detail the relationship between trade and employment for the EU as a whole and for each EU Member State, using the [World Input-Output Database](#) (WIOD), release 2016 (Timmer et al, 2015, 2016). Furthermore, the analysis complements this information with data on employment by industry, skill, age and gender using other complementary employment statistics. All indicators relate to EU exports to third countries to reflect the scope of EU external trade policymaking. We used the Trade-SCAN model developed by the JRC for the calculations (Román et al, 2020).

Most indicators are available as of 2000 but due to data constraints, the indicators on employment split by skill; gender and age are only available from 2008 to 2014. The geographical breakdown of the data includes the 27 EU Member States, Australia, Brazil, Canada, China, India, Indonesia, Japan, Mexico, Norway, Russia, South Korea, Switzerland, Turkey, Taiwan, United

Kingdom, the United States of America, and an aggregate “Rest of the World” region. Based on the WIOD input-output data for the latest year available 2014 and more recent data on international trade in goods and services, this report also provides projections for 2019. This approach is grounded in the reliable fact that technical coefficients are stable in the medium run.

The information in this pocketbook is complemented with an infographics that can be consulted at: <https://europa.eu/Un47Cp>.

Glossary

Domestic effect: employment in a given Member State that is supported by its own exports to extra-EU countries.

Employment: number of people engaged in production activities, including employees and self-employed.

EU exports: aggregate exports of goods and services of the 27 EU Member States to the world.

Extra EU employment: employment outside the EU that is supported by the exports of an EU Member State to the world. This captures the jobs in firms outside the EU that supply inputs for producing the goods and services that the EU exports to the world.

High-skilled labour: workers with tertiary education.

Industry: economic branch of activity gathering firms and/or production plants producing the same good or service as their main activity.

Low-skilled labour: workers with less than primary, primary and lower secondary education.

Medium-skilled labour: workers with upper secondary and post-secondary non-tertiary education.

Sector: group of industries.

Spillover effect: employment in a given Member State that is supported by the exports of another Member State to the world.

HOW TO READ THIS REPORT

This report is organised as follows:

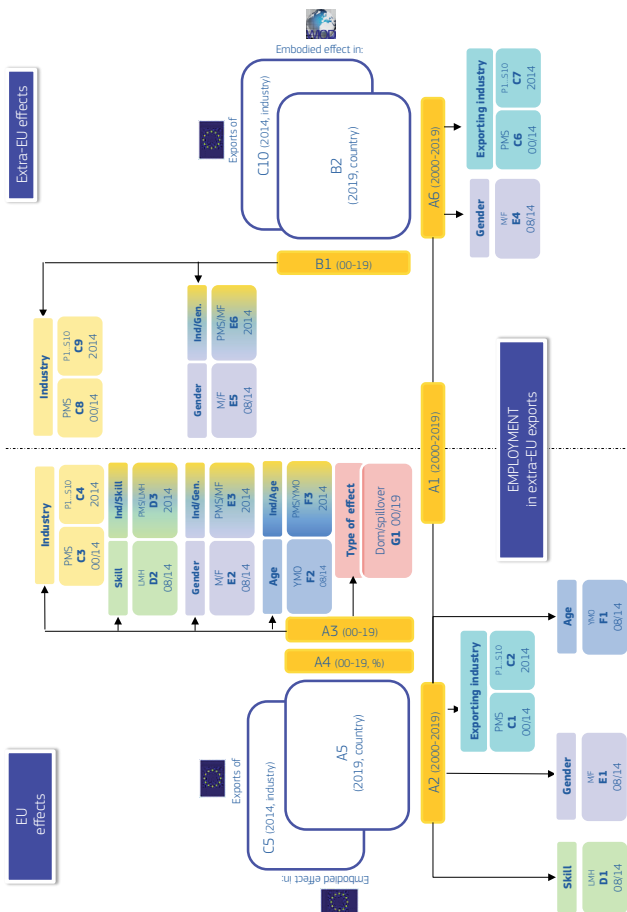

- Introduction
- Abbreviations and glossary
- How to read this report
- A. Indicators by EU Member State
- B. Indicators by trading partner
- C. Indicators by industry or sector
- D. Indicators by skill
- E. Indicators by gender
- F. Indicator by age
- G. Indicator by effect
- H. Country factsheets
- Data sources and methodology

Sections A to G show all the indicators related to the (EU and extra-EU) employment supported by EU exports to the world, including the relevant information for each Member State. We suggest using Figure 1 for an overview of all the inter-linkages across tables. As shown in Figure 1, all tables pivot around Tables A.5 (EU effects) and B.2 (Extra-EU effects). They both show where the effects take place (rows) and which country is driving those effects (columns). As a result, each element of the Table A.5 reports the employment in a given Member State (row *i*) supported by the exports of a Member State (column *j*). All other tables split these results by industries, sectors, skill levels, gender, age and type of effect. For instance, in order to know how much employment in Spain is supported by EU exports, one should look at Table A3. Besides, tables C.5 and C.10 show the same results but focusing on the industry breakdown and removing the country dimension.

Section H contains factsheets for each Member State, drawing on the information from sections A to G and the last section briefly describes the data sources and methodology.

Figure 1

How to read this report

A. By EU Member State

EU exports to the world support 38 million jobs

The number of jobs supported by the European Union's exports to the world keeps a growing path since 2000, increasing the number of jobs directly or indirectly linked to such exports by 75%. For 2019, around 38 million jobs were supported by the EU exports to non-EU countries. Furthermore, the number of jobs has increased by 11 million in the last decade.

NOTE: For the year 2019, given the absence of the corresponding WIOD tables, the results are projections based on the estimations of 2014, so they should be taken with caution. These projections have been elaborated by the JRC using international trade in goods and services statistics (Eurostat) of 2019 and assuming the same input-output table's structure as in 2014. Nonetheless, the export values of 2019 were adjusted to reflect price changes and methodological differences between trade statistics and National Accounts (e.g. re-exports, processing services and merchanting) thus increasing further the reliability of the projected estimates (for more details see also section on data sources and methodology).

(p) = projected (see section on Methodology)

In 2019, Germany's extra-EU exports supported 13.9 million jobs worldwide.

A.1. Total (EU and third countries) employment supported by the exports of each EU Member State (2000, 2019; %)

(p) = projected (see section on Methodology)

Between 2000 and 2019, total employment supported by EU exports increased by 29.3m jobs (+89%), reaching 62.5m jobs. The growth in total employment supported by EU exports was led by the exports of Germany (+6.2m jobs), Ireland (4.0m jobs), the Netherlands (2.8m jobs), France (+1.9m jobs), Poland (+1.9m jobs), Italy (+1.8m jobs) and Spain (+1.8m jobs). In 2019, 22% of employment supported by EU exports was driven by sales from Germany to extra-EU countries (13.9m jobs), 10% by French exports and 9% by Italian exports.

A.2. EU employment supported by the exports of each Member State (2000-2019; 1,000 jobs)

EU	21,758	25,881	31,613	38,135

(p) = projected (see section on Methodology)

In 2019, Germany's extra-EU exports supported around 9.3 million jobs in the EU.

A.2. EU employment supported by the exports of each Member State (2000, 2019; 1,000 jobs)

(p) = projected (see section on Methodology)

Between 2000 and 2019 EU employment supported by EU exports increased by 16.4m jobs (+75%) to reach a total of 38.1m jobs. This growth was driven by the extra-EU exports from Germany (+4.2m jobs), Poland (+1.5m jobs), Italy (+1.2m jobs), Ireland (+1.2m jobs), France (+1.2m jobs) and Spain (+1.0m jobs). In 2019, Germany's extra-EU exports supported 9.3m jobs across the EU (this represented 24% of total EU employment supported by EU exports). France's extra-EU exports supported 4.1m jobs (11%) across the EU, while Italy's extra-EU exports supported 3.7m jobs across the EU (10%).

A.3. Employment by Member State supported by EU exports (2000-2019; 1,000 jobs)

(p) = projected (see section on Methodology)

In 2019, EU exports to the world supported around 4 million jobs in France.

A.3. Employment by Member State supported by EU exports (2000, 2019; 1,000 jobs)

(p) = projected (see section on Methodology)

Between 2000 and 2019, EU employment supported by EU exports to the world increased 16.4m jobs (75%), to reach a total of 38.1m jobs. Most of the increase was in Germany (+4.0m jobs), Poland (+1.8m jobs), Italy (+1.3m jobs) and France (+1.2m jobs). In 2019, the exports of the whole EU to the world supported 8.9m jobs in Germany (23% of total employment supported by EU exports across the EU), 4.0m jobs in France (10%), 3.7m jobs in Italy (10%) and 3.1m jobs in Poland (8%).

A.4. Employment supported by EU exports as a percentage of total employment, by Member State (2000-2019; %)

(p) = projected (see section on Methodology)

In 2019, in France 13.9% of the total employment was supported by the EU exports to the world.

A.4. Employment supported by EU exports as a percentage of total employment, by Member State (2000, 2019; %)

(p) = projected (see section on Methodology)

Between 2000 and 2019, the share of employment across the EU supported by the sales of goods and services to the world increased from 11.6% in 2000 to 18.2% in 2019. In 2019, in all Member States EU exports of the whole EU supported more than 11% of the domestic employment. Over 50% of the total employment in Ireland, and over one third in Luxembourg were supported by EU exports. In Croatia and Lithuania around 29%, and in Bulgaria, the Netherlands and Estonia around 26%.

A.5. Employment by Member State supported by the exports of each Member State (2019; 1,000 jobs)

In 2019, Belgium's extra-EU exports supported 1.37 million jobs outside the EU.

A.6. Extra-EU employment supported by the exports of each Member State (2000, 2019; 1,000 jobs)

(p) = projected (see section on Methodology)

Between 2000 and 2019, the employment outside the EU supported by EU exports to the world increased from 11.4m jobs to 24.4m jobs. In 2019, all Member States supported more jobs abroad through their exports to the world than in 2000. Ireland was responsible for 22% of the total increase, followed by Germany (16%) and the Netherlands (14%). In 2019, 19% of employment outside the EU supported by EU exports to the world was driven by German exports, 15% by the exports of Ireland, 12% by the exports of the Netherlands, and 10% by the exports of France.

Employment in																												

NOTE: Results projected for 2019 (see section on Methodology)

In 2019, German extra-EU exports supported 1.2 million jobs in China.

B.2. Extra-EU employment by country supported by the exports of each Member State

(2019(p); %)

(p) = projected (see section on Methodology)

In 2019, EU exports to the world supported 24.4m jobs outside Europe. Most of the jobs were in China (4.5m) of which 1.2m were driven by German exports, 580,600 by the Dutch exports, 554,400 by French exports, and 379,800 by Italian exports. Germany was the Member State that contributed the most to support employment outside the EU (4.6m jobs), especially in China (1.2m jobs), India (488,200 jobs) and Russia (285,400 jobs).

C. By industry or sector

C.1. EU employment supported by the exports of each Member State – 3 exporting sectors (2000, 2014, 2019; % and 1,000 jobs)

P: primary; M: manufacturing; S: services

In 2014, German's extra-EU exports supported around 8.3 million jobs across the EU, of which 73% were driven by the exports of the German manufacturing sector.

C.1. EU employment supported by the exports of each Member State – 3 exporting sectors (2000, 2014; %)

In 2014, the manufacturing sector was responsible for 58% of EU employment supported by EU exports to the world (down from 62% in 2000). The services and primary sectors accounted for 38% and 4% respectively (compared to 35% and 3% in 2000). In 2014, in 13 Member States the manufacturing sector was responsible for more than 50% of the EU employment supported by their exports: Austria, the Czech Republic, Germany, Estonia, Spain, Finland, France, Hungary, Italy, Poland, Sweden, Slovenia and Slovakia.

C.2. EU employment supported by the exports of each Member State – 10 exporting industries (2014, 2019; % and 1,000 jobs)

(p) = projected (see section on Methodology)

P: primary; M1: food, beverages, tobacco; M2: textiles; M3: wood, paper, printing; M4: energy; M5: chemicals, M6: other non-metallic and basic metals; M7: machinery and transport equipment, S1: transport, trade and business services; S2: other services.

In 2014, Bulgarian's extra-EU exports supported around 681,000 jobs across the EU, of which 7.8% were driven by the extra-EU exports of the other non-metallic and basic metals industries (M6).

C.2. EU employment supported by the exports of each Member State – 10 exporting industries (2014; %)

In 2014, 33.7% of EU employment supported by EU exports was driven by the sales of the transport, trade and business services industries to the world (S1), ranging from 18% in Italy to 88.5% in Luxembourg. EU exports of the machinery and transport equipment industries accounted for 30% (M7), varying from 1.6% in Luxembourg to 47.9% in Germany, while non-metallic and basic metals made up 8.1% (M6).

C.3. Employment by Member State supported by EU exports – 3 sectors (2000, 2014, 2019; % and 1,000 jobs)

P: primary; M: manufacturing; S: services

In 2014, the EU exports to the world supported around 3.3 million jobs in France, of which 66% were in the services sector.

C.3. Employment by Member State supported by EU exports – 3 sectors (2014; %)

In 2014, 58% of EU employment supported by EU exports to the world was in the services sector (up from 54% in 2000), 36% in the manufacturing sector (down from 40% in 2000) and 6% in primary industries (same as in 2000). In 2014, the services sector accounted for more than 50% of the employment supported by EU exports in all Member States, except in the Czech Republic (44%), Italy (48%), Poland (46%) and Romania (49%).

C.4. Employment by Member State supported by EU exports – 10 industries (2014, 2019; % and 1,000 jobs)

P: primary; M1: food, beverages, tobacco; M2: textiles; M3: wood, paper, printing; M4: energy; M5: chemicals, M6: other non-metallic and basic metals; M7: machinery and transport equipment, S1: transport, trade and business services; S2: other services.

In 2014, the EU exports to the world supported around 672,000 jobs in Portugal, of which 8% were in the textile industry (M2).

C.4. Employment by Member State supported by EU exports – 10 industries (2014; %)

In 2014, 49.4% of the EU employment supported by EU exports to the world was in the transport, trade and business services industries (S1), ranging from 36.5% in the Czech Republic to 77.8% in Luxembourg; 15.6% in the machinery and transport equipment industries (M7), varying from 1.8% in Luxembourg to 25.4% in the Czech Republic; 8.7% in other services industries (S2), and 8.5% in the other non-metallic and basic metals industries (M6).

C.5. EU employment supported by EU exports: industry inter-linkages (2000, 2014; 1,000 jobs)

In 2014, the exports of the EU chemical industry (M5) supported around 762,000 jobs in the EU transport, trade and business services industries (S1).

C.5. EU employment supported by EU exports: industry inter-linkages (2000, 2014; 1,000 jobs)

In 2014, EU exports to the world supported 18.4m jobs in the services sector across the EU, of which 11.3m jobs were driven by the sales of the services sector to the world and 6.9m jobs were driven by the exports of the manufacturing sector. EU exports to the world supported 11.3m jobs in the manufacturing sector, of which 10.6m jobs were driven by exports of the manufacturing sector and 0.6m jobs depended on the exports of the services sector.

C.6. Extra-EU employment supported by the exports of each Member State – 3 exporting sectors (2000, 2014, 2019; % and 1,000 jobs)

P: primary; M: manufacturing; S: services

In 2014, Belgian's extra-EU exports supported around 1.3 million jobs outside the EU, of which over two thirds were driven by Belgian exports of manufactures.

C.6. Extra-EU employment supported by the exports of each Member State – 3 exporting sectors (2000, 2014; %)

In 2014, EU exports of manufactures were responsible for 70% of the employment supported by EU exports outside the EU (76% in 2000); the services and primary sectors made up 28% and 2% respectively (22% and 2% in 2000). In 2014, services exports made the largest contribution to employment outside the EU in Cyprus, Denmark, Ireland, Luxembourg and Malta.

C.7. Extra-EU employment supported by the exports of each Member State – 10 exporting industries (2014, 2019; % and 1,000 jobs)

P: primary; M1: food, beverages, tobacco; M2: textiles; M3: wood, paper, printing; M4: energy; M5: chemicals; M6: other non-metallic and basic metals; M7: machinery and transport equipment; S1: transport, trade and business services; S2: other services.

In 2014, Estonian's extra-EU exports supported 61,000 jobs outside the EU, of which 9.7% were driven by the exports of the food industry (M1).

C.7. EU employment supported by the exports of each Member State – 10 exporting industries (2014; %)

In 2014, the machinery and transport equipment industries (M7) were responsible for 30.5% of the employment outside the EU supported by extra-EU exports. The contribution of the transport, trade and business services industries (S1) was 26.6%, and that of the chemical industry (M5) was 9.1%. In most Member States, their exports of machinery and transport equipment industries (M7) as well as of transport, trade and business services industries (S1) contributed the most to employment abroad.

C.8. Extra-EU employment by country and by sector supported by EU exports (2000, 2014, 2019; % and 1,000 jobs)

P: primary; M: manufacturing; S: services

In 2014, EU exports to the world supported around 3.7 million jobs in China, of which 40% were in the Chinese services sector.

C.8. Extra-EU employment by country and by sector supported by EU exports (2000, 2014; %)

In 2014, the services sector accounted for 47% of the employment supported outside the EU by the exports of the EU to the world (37% in 2000); the manufacturing sector for 29% (36% in 2000) and the primary sector for 24% (27% in 2000). In Japan, Turkey and Taiwan more than 50% of the employment supported by extra-EU exports was in their manufacturing sector.

In 2014, EU exports to the world of the food industry (M1) supported 1.2 million jobs in the primary industries (P) of non-EU countries.

C.10. Extra-EU employment supported by EU exports: inter-industry linkages (2000, 2014; 1,000 jobs)

In 2014, EU exports to the world supported 9.1m jobs in the services sector outside the EU, of which, 5.3m were driven by the EU exports of the manufacturing sector and 3.7m by the EU services exports. In 2014, EU exports to the world supported 5.5m jobs in the manufacturing sector across the world, of which 4.6m were linked to the EU manufacturing sector exports and 0.9m were supported by the EU services exports. EU exports to the world supported 4.6m jobs in the primary sector outside the EU, mainly due to the exports of the EU manufacturing sector.

D. By skill

D.1. EU employment supported by the exports of each Member State (2008, 2014, 2019; % and 1,000 jobs)

(p) = projected (see section on Methodology)

In 2014, German's extra-EU exports supported 8.3 million jobs across the EU, of which 26% were high-skilled.

D.1. EU employment supported by the exports of each Member State (2008, 2014; %)

In 2014, medium-skilled jobs made up 53% of EU employment supported by EU exports (slightly down from 54% in 2008). The high-skilled jobs represented 27% (22% in 2008) of the total and low-skilled jobs 20% (down from 24% in 2008). Low-skilled employment was dominant in the exports of Portugal (55%) and high-skilled in the exports of Ireland (41%) and Spain (38%). In the exports of the rest of the Member States, medium-skilled jobs were the main category of employment.

D.2. Employment by Member State supported by EU exports (2008, 2014, 2019; % and 1,000 jobs)

(p) = projected (see section on Methodology)

In 2014, EU exports to the world supported around 664,000 jobs in Austria, of which 28% were high-skilled jobs.

D.2. Employment by Member State supported by EU exports (2008, 2014; %)

In 2014, medium-skilled jobs constituted 53% of EU employment supported by EU exports to the world (54% in 2000); high-skilled employment made up 27% (up from 22% in 2000) of the total and low-skilled employment 20% (down from 24% in 2000). In Ireland, Luxembourg and Spain high-skilled workers dominated employment supported by the EU exports to the world. In contrast, low-skilled jobs made up the largest segment of employment supported by EU exports in Malta (45%) and Portugal (58%).

In 2014, EU exports to the world supported around 664,000 jobs in Austria, of which 38% were female workers.

E.2. Employment by Member State supported by EU exports (2008, 2014; %)

In 2014, male workers constituted 63% of EU employment supported by EU exports to the world (62% in 2000). In all Member States male workers accounted for more than 55% of their employment supported by all EU exports. In Bulgaria, Cyprus, Estonia, Croatia, Lithuania, Latvia, Romania and Slovakia female workers were above 40% of the employment supported by all extra-EU exports.

E.3. Employment by Member State supported by EU exports by sector (2014, 2019; % and 1,000 jobs)

(p) = projected (see section on Methodology)

In 2019, EU exports to the world supported 523,000 jobs in Slovakia, of which, 27% were associated with spillover effects (employment in firms in Slovakia that supplied inputs to be used in the exports of other Member States to the world). The rest were linked to Slovak extra-EU exports.

G.1. Employment by Member State supported by EU exports (2000, 2019; %)

In 2019, 83% of the EU employment supported by EU exports to the world was located in the same Member State actually exporting outside the EU (87% in 2000), while 17% was due to spillovers (13% in 2000). In the Czech Republic and Hungary at least 30% of the employment supported by EU exports was due to spillovers. In other words, these were jobs located in Member States different from the exporting countries and producing intermediate inputs that were used to produce exports. In Greece and Ireland, less than 6% of the employment supported by EU exports to the world was due to spillovers.

H. Country factsheets

Austria

- Exports create **opportunities for everyone**.

In Romania, most people in export-related jobs are **medium-skilled** workers.

49% of export-related jobs in Romania are in services.

Exports keep the Romanian services industry strong.

November, 2021

Sweden

EXPORTS MEAN JOBS

Swedish companies' exports outside the EU are worth €108 billion in 2019. And this keeps 951 thousand Swedish workers busy...

- Swedish extra-EU exports support **779 thousand** jobs in Sweden.
- Another **172 thousand** Swedish workers are in jobs linked to exports from other EU countries to the world.
- This means **19% of jobs** in Sweden depend on extra-EU exports.
- Swedish extra-EU exports also support over **199 thousand** jobs in EU countries.
- Exports create **opportunities for everyone**.

In Sweden, most people in export-related jobs are **medium-skilled** workers.

66% of export-related jobs in Sweden are in services.

Exports keep the Swedish services industry strong.

November, 2021

Slovenia

EXPORTS MEAN JOBS

Slovenian companies' exports outside the EU are worth €13 billion in 2019. And this keeps 239 thousand Slovenian workers busy...

Slovenian extra-EU exports support **181 thousand** jobs in Slovenia.

Another **58 thousand** Slovenian workers are in jobs linked to exports from other EU countries to the world.

This means **23% of jobs** in Slovenia depend on extra-EU exports.

Slovenian extra-EU exports also support over **41 thousand** jobs in EU countries.

Exports create **opportunities for everyone**.

In Slovenia most people in export-related jobs are **medium-skilled** workers.

51% of export-related jobs in Slovenia are in services.

Exports keep the Slovenian services industry strong.

November, 2021

Slovakia

EXPORTS MEAN JOBS

Slovak companies' exports outside the EU are worth €19 billion in 2019. And this keeps 523 thousand Slovak workers busy...

Slovak extra-EU exports support **382 thousand** jobs in Slovakia.

Another **141 thousand** Slovak workers are in jobs linked to exports from other EU countries to the world.

This means **21% of jobs** in Slovakia depend on extra-EU exports.

Slovak extra-EU exports also support over **126 thousand** jobs in EU countries.

Exports create **opportunities for everyone**.

In Slovakia, most people in export-related jobs are **medium-skilled** workers.

54% of export-related jobs in Slovakia are in services.

Exports keep the Slovak services industry strong.

November, 2021

European Union EXPORTS MEAN JOBS

In 2019, EU exports support **38 million** jobs*, up by 75% from 2000.
More than **14 million** of these workers are **women**.

1 in 5 jobs
in the EU depends on exports.

Exports support **jobs in both services and manufacturing**.

EU exports support a significant share of jobs **in all countries across the EU**.

58% of export-supported jobs in the EU are in services.

Exports create **opportunities for everyone**, both skilled and unskilled workers. These jobs are better paid on average.

Joining forces benefits all of us!
Thanks to the EU Single Market, 17% of the export-supported jobs are located in a different Member State than the one exporting.

Last but not least, EU exports support **24 million jobs outside the EU**, including many in developing countries.

* Latest data available: 2019

DATA SOURCES AND METHODOLOGY

World Input-Output Database (2000-2014)

The European Commission-funded World Input-Output Database (WIOD) consists of a set of harmonised Supply, Use, and Input-Output (IO) tables, valued at current prices and prices of the previous year. It also includes data on international trade, industry output, value added (VA), capital stock and investment, as well as satellite accounts with various environmental and socio-economic indicators, such as energy, water, land, and materials consumption, emissions, wages and employment. The latest version of the database (Release 2016) covers 27 EU Member States and 16 other major economies in the world as well as the “Rest of the World” as an aggregated region. The new WIOD database features a breakdown of 56 industries, but lacks data on some of the indicators reported in this pocketbook such as employment by gender or skill.

Therefore, the WIOD database has been complemented with data from other sources such as EUKLEMS and the International Labour Organization (ILO). In particular, data on employment by gender, skill and age have been taken from such data sources. Besides, the WIOD does not include employment figures for the “Rest of the World”. These figures were estimated using data from the ILO and the labour productivity of the WIOD countries

The WIOD covers the period 2000 to 2014. However, some data are limited to the period 2008-2014. This is the case of the data on employment by gender, skill and age, which are only available for the period 2008-2014. Therefore, all the indicators reported in this publication cover the period 2000–2014, with the exception of those for which the necessary data are not available for the years before 2008.

The WIOD database is freely downloadable at www.wiod.org. A detailed description of the content is also available there.

Methodology

As mentioned in the introduction, this publication includes a short set of general indicators, together with an extended set of tables related to the employment supported by EU exports to the world. The information for the calculation of the general indicators comes directly from the WIOD database, EUKLEMS and ILO, with only minor additional calculations to obtain some derived indicators such as shares or intensities.

However, the method for the calculation of the indicators related to EU exports to the world is not straightforward and requires further explanation. In order to obtain the EU and extra-EU employment supported by extra-EU exports we have used a Multi-Regional Input-Output (MRIO) model together with the information of WIOD. MRIO models have been widely used to explore different economic and environmental consequences of trade (Miller and Blair, 2009; Murray and Lenzen, 2013).

Following Arto et al (2019), the methodology is described for the case of four regions (2 EU countries and 2 extra-EU countries) with n industries, but it can be applied to any number of regions and industries. In this study, the model was applied to 44 regions, 56 industries (for simplicity we have aggregated the results to 10 industries and 3 sectors). Note that the MRIO tables used in the calculations are industry by industry IO tables. Accordingly, all the data reported in this document is reported by industry (e.g. we report the employment supported by the exports of the manufacturing industry and not the employment supported by the exports of manufactured products).

The starting point of the model is a MRIO table at basic prices. This table describes the flows of goods and services from all industries to all intermediate and final users, explicitly broken down by countries of origin and by countries of destination in each flow.

We can distinguish three main components in the MRIO table:

$$Z = \begin{bmatrix} Z^{11} & Z^{12} & Z^{13} & Z^{14} \\ Z^{21} & Z^{22} & Z^{23} & Z^{24} \\ Z^{31} & Z^{32} & Z^{33} & Z^{34} \\ Z^{41} & Z^{42} & Z^{43} & Z^{44} \end{bmatrix}, \quad f = \begin{bmatrix} f^{11} + f^{12} + f^{13} + f^{14} \\ f^{21} + f^{22} + f^{23} + f^{24} \\ f^{31} + f^{32} + f^{33} + f^{34} \\ f^{41} + f^{42} + f^{43} + f^{44} \end{bmatrix},$$

$$x = \begin{bmatrix} x^1 \\ x^2 \\ x^3 \\ x^4 \end{bmatrix},$$

where Z^{rs} is the intermediate matrix with sectorial deliveries from country r to country s ; f^{rs} is the column vector of country s final demand (including household consumption, government consumption, and investment) for goods produced by country r ; and x^r is the column vector of gross output for country r . Furthermore, let us assume that the MRIO table is extended to include a vector of employment:

$$\mathbf{w} = \begin{bmatrix} w^1 \\ w^2 \\ w^3 \\ w^4 \end{bmatrix}$$

The relation between \mathbf{x} , \mathbf{Z} and \mathbf{f} is defined by the accounting equation $\mathbf{x} = \mathbf{Z}\mathbf{i} + \mathbf{f}$, where \mathbf{i} is the column summation vector consisting of ones.

Suppose that countries 1 and 2 represent the EU and the remaining countries (3 and 4) are extra-EU countries. In such a case, we can define the components of the MRIO framework of the EU as:

$$\mathbf{Z}^{\text{EU}} = \begin{bmatrix} \mathbf{Z}^{11} & \mathbf{Z}^{12} \\ \mathbf{Z}^{21} & \mathbf{Z}^{22} \end{bmatrix}, \quad \mathbf{f}^{\text{EU}} = \begin{bmatrix} \mathbf{f}^{11} + \mathbf{f}^{12} + \mathbf{e}^{13} + \mathbf{e}^{14} \\ \mathbf{f}^{21} + \mathbf{f}^{22} + \mathbf{e}^{23} + \mathbf{e}^{24} \end{bmatrix},$$

$$\mathbf{x}^{\text{EU}} = \begin{bmatrix} \mathbf{x}^1 \\ \mathbf{x}^2 \end{bmatrix}, \quad \mathbf{w}^{\text{EU}} = \begin{bmatrix} w^1 \\ w^2 \end{bmatrix}$$

where $\mathbf{e}^{ij} = \mathbf{f}^{ij} + \mathbf{Z}^{ij}\mathbf{i}$ represents the extra-EU exports from the Member State i to the extra-EU country j (with $i \neq j$).

The input coefficient matrix for the EU is defined as $\mathbf{A}^{\text{EU}} = \mathbf{Z}^{\text{EU}} (\hat{\mathbf{x}}^{\text{EU}})^{-1}$, where $(\hat{\mathbf{x}}^{\text{EU}})$ is a diagonal matrix with the values of vector along the diagonal and zero elsewhere. Thus, the accounting equation can now be written as the standard input-output model: $\mathbf{x}^{\text{EU}} = \mathbf{A}^{\text{EU}} \mathbf{x}^{\text{EU}} + \mathbf{f}^{\text{EU}}$. For a certain final demand vector \mathbf{f}^{EU} , the solution to the model is given by $\mathbf{x}^{\text{EU}} = \mathbf{L}^{\text{EU}} \mathbf{f}^{\text{EU}}$, where $\mathbf{L}^{\text{EU}} \equiv (\mathbf{I} - \mathbf{A}^{\text{EU}})^{-1}$ is the Leontief inverse of the EU. Thus, multiplying the Leontief inverse of the EU by the extra-EU exports we obtain the total output in the EU to produce exported goods and services:

$$\mathbf{x}_{\text{exeu}}^{\text{EU}} = \mathbf{L}^{\text{EU}} \mathbf{e}^{\text{EU}} \quad [1]$$

The employment coefficients vector, $\mathbf{v}^{\text{EU}} = (\hat{\mathbf{x}})^{\text{EU}^{-1}} \mathbf{w}^{\text{EU}}$, yields the EU employment per unit of output. Hence, the employment supported in the EU due to the production of extra-EU exports (i.e. EU employment embodied in extra-EU exports) is given by

$$\begin{aligned} \mathbf{w}_{\text{exeu}}^{\text{EU}} &= (\mathbf{v}^{\text{EU}})' \mathbf{L}^{\text{EU}} \mathbf{e}^{\text{EU}} = (\mathbf{v}^1)' \mathbf{L}^{11} \mathbf{e}^{13} + (\mathbf{v}^1)' \mathbf{L}^{11} \mathbf{e}^{14} \\ &+ (\mathbf{v}^1)' \mathbf{L}^{12} \mathbf{e}^{23} + (\mathbf{v}^1)' \mathbf{L}^{12} \mathbf{e}^{24} + (\mathbf{v}^2)' \mathbf{L}^{21} \mathbf{e}^{13} + (\mathbf{v}^2)' \mathbf{L}^{21} \mathbf{e}^{14} \quad [2] \\ &+ (\mathbf{v}^2)' \mathbf{L}^{22} \mathbf{e}^{23} + (\mathbf{v}^2)' \mathbf{L}^{22} \mathbf{e}^{24} \end{aligned}$$

where $(\mathbf{v}^i)' \mathbf{L}^{ij} \mathbf{e}^{jk}$ is the employment supported in country i of the EU due by the extra-EU exports of Member State j to extra-EU country k .

From expression [1] we can also derive the extra-EU employment embodied in extra-EU exports. First, we define the matrix of extra-EU imports coefficients of the EU as $\mathbf{A}^{\text{noEU},\text{EU}} = \mathbf{Z}^{\text{noEU},\text{EU}} (\hat{\mathbf{x}}^{\text{EU}})^{-1}$, where

$$\mathbf{Z}^{\text{noEU},\text{EU}} = \begin{bmatrix} \mathbf{Z}^{31} & \mathbf{Z}^{32} \\ \mathbf{Z}^{41} & \mathbf{Z}^{42} \end{bmatrix}$$

Pre-multiplying expression [2] by the matrix of extra-EU imports coefficients of the EU, we obtain the vector of intermediate imports of the EU from extra-EU countries or, alternatively, the exports of extra-EU countries to the EU:

$$\mathbf{A}^{\text{noEU},\text{EU}} \mathbf{L}^{\text{EU}} \mathbf{e}^{\text{EU}} \quad [3]$$

It follows that the extra-EU employment in extra EU exports can be calculated as:

$$\mathbf{w}_{\text{exeu}}^{\text{noEU}} = (\mathbf{v}^{\text{noEU}})' \mathbf{L}^{\text{noEU}} \mathbf{A}^{\text{noEU},\text{EU}} \mathbf{L}^{\text{EU}} \mathbf{e}^{\text{EU}} \quad [4]$$

Where $\hat{\mathbf{v}}^{\text{noEU}}$ and \mathbf{L}^{noEU} are the vector of employment coefficients and the Leontief inverse of the extra-EU countries respectively.

We can expand [4] in a similar fashion as [2] to obtain the different components of the extra-EU employment in extra-EU exports. Thus, the element $(\mathbf{v}^m)' \mathbf{L}^{ml} \mathbf{A}^{li} \mathbf{L}^{ij} \mathbf{e}^{jk}$ of the resulting expression would represent the employment supported in extra-EU country m due to the production of intermediate exports of extra-EU country l to EU-country i that are used to produce the extra-EU exports from EU country j to extra-EU country k . In other words, it would be the employment supported in Australia (m) to produce metals that would be exported to China (l) for the production of vehicles parts. These vehicles parts would be exported then from China to the Czech Republic (i) for the production of engines of cars that would be sold to Germany (j). Eventually, Germany would export cars to Japan (k).

Projections (2019)

For the year 2019, given the absence of the corresponding WIOD tables, the results are all projections based on the estimations of 2014, so they should be taken with caution. These projections have been elaborated by the JRC using international trade in goods and services statistics (Eurostat) of 2019 and assuming the same number of jobs embodied in every million EUR worth of exports to the world as in 2014, different per exporting country and per country where the employment is located.

The export values of 2019^{*} were converted into volumes of the year 2014 by using the Eurostat's producer price in industry indices for non-domestic markets (sts_inppnd_a) and the service producer price indices (sts_sepp_a) at country level.

The resulting export values were further adjusted to reflect the methodological differences between trade statistics and National Accounts (e.g. e-exports, processing services, merchanting). With such purpose, we estimated country-specific adjustment factors based on the difference between trade statistics values and National Accounts values in 2019.

Finally yet importantly, the reader should be aware that these projections do not reflect the changes in labour productivity, technology, goods and services export composition and intra-EU trade structures occurred between 2014 and 2019. Besides, sector, skill, age and gender shares are those of 2014 due to the absence of data availability.

^{*} For services price indices, we used the EU average price change for Austria, Denmark, Finland, France, Ireland, Italy, Luxembourg and Sweden. Alternatively, we used the price changes of Lithuania, Cyprus and Spain for Estonia, Malta and Portugal, respectively, since they were completely missing. For Bulgaria, Cyprus and Germany we also had to interpolate backwards to 2014 from 2015 to complete the time series of price indices. In goods all data were available for 2019, including price indices.

ACKNOWLEDGEMENTS

Special thanks go to Xenia Garcia and Emiliano Bruno for their support in the edition and revision of this report.

GETTING IN TOUCH WITH THE EU

In person

All over the European Union there are hundreds of Europe Direct information centres. You can find the address of the centre nearest you at: https://europa.eu/european-union/contact_en

On the phone or by email

Europe Direct is a service that answers your questions about the European Union. You can contact this service:

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696, or
- by electronic mail via: https://europa.eu/european-union/contact_en

FINDING INFORMATION ABOUT THE EU

Online

Information about the European Union in all the official languages of the EU is available on the Europa website at: https://europa.eu/european-union/index_en

EU publications

You can download or order free and priced EU publications from EU Bookshop at: <https://publications.europa.eu/en/publications>. Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see https://europa.eu/european-union/contact_en).
